Neurodiversity is an expression of different cognitive learning modalities. Characteristics such as dyslexia, dyspraxia, autism and ADHD are classified as neurodiverse or neurodivergent. According to the definition, up to one-fifth of the population can be considered neurodiverse.

The specific requirements and needs of neurodiverse people differ significantly from those of neurotypical people. Companies, in particular, and society at the whole, benefit if the needs of neurodiverse people are understood and taken seriously, for example, by offering an appropriately sensitised, inclusive and diverse working environment. Studies show that companies generate competitive advantages when they design their personnel processes so that the untapped talents and strengths of neurodiverse people can be discovered and promoted. The workshop discussion with speakers from different contexts aims to raise awareness of neurodiversity in the workplace. It will highlight the current diversity in companies and society and discuss barriers and challenges that neurodiverse people face in the workplace. An intersectional perspective will be adopted throughout, considering the categories of gender and ethnicity.
